\*\*\*\*\* ABOUT MICRO-80 \*\*\*\*\*

EDITOR:	RYSZARD WIWATOWSKI
ASSOCIATE EDITORS:	
SOFTWARE :	CHARLIE BARTLETT
HARDWARE :	EDWIN PAAY

MICRO-80 is an international magazine devoted to the Tandy TRS-80 Model I, Model III and Colour microcomputers, the Dick Smith System 80/Video Genie and the Hitachi Peach. It is available at the following prices:

	12 MONTH SUB.	SINGLE COPY
MAGAZINE ONLY	\$ 26-00	\$ 2-50
CASSETTE PLUS MAGAZINE	\$ 65-00	\$ 4-00 (cass. only)
DISK PLUS MAGAZINE	\$125-00	\$10-00 (disk only)

MICRO-80 is available in the United Kingdom from:  
U.K. SUBSCRIPTION DEPT. 24 Woodhill Park, Pembury, Tunbridge Wells, KENT TN2 4NW

MAGAZINE ONLY	£ 16-00	£ 1-50
CASSETTE PLUS MAGAZINE	£ 43-60	£ N/A
DISK PLUS MAGAZINE	£ 75-00	£ N/A

MICRO-80 is available in New Zealand from:

MICRO PROCESSOR SERVICES, 940A Columbo Street, CHRISTCHURCH 1 N.Z. Ph 62894

MAGAZINE ONLY	NZ\$ 43-00	NZ\$ 4-00
CASSETTE PLUS MAGAZINE	NZ\$ 89-00	NZ\$ 5-00
DISK PLUS MAGAZINE	NZ\$175-00	NZ\$15-00

MICRO-80 is despatched from Australia by airmail to other countries at the following rates:

	(12 MONTH SUB) MAGAZINE	CASS + MAG	DISK + MAG
PAPUA NEW GUINEA	Aus\$40-00	Aus\$ 83-00	Aus\$ 143-00
HONG KONG/SINGAPORE	Aus\$44-00	Aus\$ 88-00	Aus\$ 148-00
INDIA/JAPAN	Aus\$49-00	Aus\$ 95-00	Aus\$ 155-00
USA/MIDDLE EAST/CANADA	Aus\$55-00	Aus\$102-00	Aus\$ 162-00

Special bulk purchase rates are also available to computer shops etc. Please use the form in this issue to order your copy or subscription.

The purpose of MICRO-80 is to publish software and other information to help you get the most from your TRS-80, System 80/Video Genie or Peach and its peripherals. MICRO-80 is in no way connected with any of the Tandy, Dick Smith or Hitachi organisations.

**\*\* WE WILL PAY YOU TO PUBLISH YOUR PROGRAMS \*\***

Most of the information we publish is provided by our readers, to whom we pay royalties. An application form containing full details of how you can use your microcomputer to earn some extra income is included in every issue.

**\*\* CONTENT \*\***

Each month we publish at least one applications program in BASIC for each of the microcomputers we support. We also publish Utility programs in BASIC and Machine Language. We publish articles on hardware modifications, constructional articles for useful peripherals, articles on programming techniques both in Assembly Language and BASIC, new product reviews for both hardware and software and we print letters to the Editor.

**\*\* COPYRIGHT \*\***

All the material published in this magazine is under copyright. This means that you must not copy it, except for your own use. This applies to photocopying the magazine itself or making copies of programs on tape or disk.

**\*\* LIABILITY \*\***

The programs and other articles in MICRO-80 are published in good faith and we do our utmost to ensure that they function as described. However, no liability can be accepted for the failure of any program or other article to function satisfactorily or for any consequential damages arising from their use for any purpose whatsoever.

## \*\*\*\*\* EDITORIAL \*\*\*\*\*

As we begin volume four of MICRO-80, a number of profound changes have taken place in the area of personal computers of particular interest to our readers. Production of the TRS-80 Model I stopped long ago and the System-80/Video Genie is also no longer being made. The introduction of the Models 4 and 12 will no doubt see an end to the production of the Models 2 and 3. But despite this, the most popular computer in the Australian home is still the Model I or System-80 and the majority of our readers own 16K Level 2 cassette-based systems. Disk users and Model 3 owners comprise a large proportion of the remainder followed by a smaller number of Colour Computer and Peach owners. What then can our readers expect from MICRO-80 in the coming months?

Firstly, a wide variety of programs to run on your computer including games, utilities and applications. More articles on programming techniques, hardware projects and topics of special interest such as the technical aspects of disk drives and operating systems, at various levels to suit the beginner and the more advanced user. Critical reviews of both software and hardware products available for your computer and as many hints, tips and useful facts to help you learn more about your computer as we can squeeze into the magazine. As a measure of our sincerity, we are putting the finishing touches on a free software offer to all our new subscribers and those renewing their subscriptions (starting with this issue). For our Group One and Form Three readers, the Software Library has been revised and improved with the addition of several new programs. A completely new Software Library has been developed for our Colour Computer readers and Peach owners will get a choice of one of three commercially available games!

BUGET COMPUTERS

At the moment, the interest of computer manufacturers is focussed on the potentially very large domestic market. Although this section of the community is eager to learn more about the personal computer, it is also very reluctant to outlay too much money to buy one. Therefore, the recent trend has been to offer a very low cost entry into computing like the VZ-200 priced at \$199. So it is not surprising to see Tandy introduce the MC-10 Colour Computer into the U.S. market for just under \$US120.

A smaller, less powerful machine than the TRS-80CC, the MC-10's main features are its compact size, colour graphics and sound. Inside it features the Motorola MC6803 processor, 4K of RAM (which can be expanded externally by an extra 16K) and an 8K BASIC interpreter in ROM. Although the cassette and RS232 ports maintain hardware compatibility with the TRS-80CC, the different Microcolour BASIC and the different processor prevent direct software compatibility. I expect that when released in Australia, the price of the MC-10 will be comparable with that of the VZ-200.

Unfortunately, the advantages of low-price are offset by the general lack of good quality software. No matter how impressive the hardware, without software it is of little use to anyone. It will also be interesting to see the price of software for these machines - at around \$25 per game, it would require the purchase of only 8 games before you exceed the price of the machine itself!

## \*\*\*\*\* INPUT/OUTPUT \*\*\*\*\*

From: M.J. Moore - Oxley, Qld.

I would appreciate your publishing this plea for help in the "Input/Output" section of your magazine in the hope that a reader may have overcome the problem that I have been experiencing.

I have a System 80 to which I have attached a TC8 Cassette Operating System via a Syspand 80 bus converter. The system will only enable switching of the remote cassette motor and not transfer of programs or data. The TC8 has been tested and operates perfectly on the TRS-80. I removed the Syspand 80 and connected the TC8 directly to the System 80, but the result was the same.

It would appear that I have a software problem with the driver routine for the TC8. Can anyone please help?

(At a guess, I would say your problem is related to the cassette port differences between the System 80 and the TRS-80, particularly in the treatment of bit 2 (see letter p.5 July '82 issue). Perhaps one of our readers can provide a solution to this problem - Ed.)

From: P. Bunyan - Jervis Bay, A.C.T.

I am in the process of building the joystick interface controller and was wondering if the interface can be used as a Centronics parallel interface for a printer or a serial interface. I think it would be good to have an article about this in MICRO-80. In the meantime, could you give me some information as to how the joystick interface could be used to control a printer?

(I presume that you are referring to the "Joystick and I/O Ports" project by Allan Dent, in

which case the answer is 'No'. This joystick interface is not suited to such an application and Allan doesn't recommend trying to use it in this way. However, I agree that it would be good to have a constructional article on a Centronics printer interface in the magazine. Any takers? - Ed.)

From: K.W. Glasson - Karalee, Qld.

I have noticed from time to time in MICRO-80 a few one line programs and I thought you may be interested in one of my "one liners". I call it a Mosaic Generator for reasons which are obvious once you've run it. It helps some people to relax just as you can do by staring at an open fire or by watching fish swimming around an aquarium.

Might I add a suggestion that when the time lapse between your acceptance of a program and its appearing in MICRO-80 exceeds say 6 months, that the contributor be approached for any new information concerning the program prior to its going to press. In my own case, I submitted a program called "Loan Calculation Package" and its acceptance for publication was a source of pride. However, its appearance in MICRO-80 some 18 months later was a source of embarrassment. During the interim I had improved it in many ways and your magazine could have had the improved version for the asking.

Here is the "one liner" -

```
10 CLS: FOR S = 1 TO 5: FOR D = 1 TO 100: X = RND(63): Y = RND(23): SET (X,Y):
  SET (127-X,Y): SET (X,47-Y): SET (127-X,47-Y): NEXT D: FOR F = 1 TO 500: NEXT F:
  NEXT S: GOTO 10
```

I hope you like it.

(Thank you for your suggestion and I'm sure our readers will find the one-liner interesting. Although what you propose has merit, we believe that it would not be practical to implement. Most, if not all, of the programs that we have on file are at least six months old and we would need to contact the authors for every program to be published. The updated version (if any was available) would have to be tested and the accompanying description altered where required. Assuming that no problems arise, this procedure would at least double the amount of time spent in the preparation of each program and inevitably lead to production delays - an intolerable situation. -Ed.)

From: Gavin Daniels

I have recently purchased an expansion unit and disk drives for my System 80 MK II and I am finding it difficult to put all my system programs from tape to disk. Could you please help remedy this problem by specifying a particular program which can do it, or is it possible to change the listing of the System Copier on the MICRO-80 cassette so it will save to a disk?

Is it also possible to change all my machine language programs like ASYLUM which save data to cassette to save it to disk? If so, could you please send me the modifications for the following programs: ASYLUM, ADVENTURE 9, EDITOR ASSEMBLER PLUS, ZMON, CUBE, HOUSEHOLD ACCOUNTS VERS 3.0, HELLFIRE WARRIOR, BMON, ROBOT ATTACK, GALACTIC EMPIRE, etc.

Please note that the games GALACTIC EMPIRE (Broederbund software) and HELLFIRE WARRIOR (Dunjonquest) are written in BASIC.

(Disk operating systems, like DOSPLUS and NEWDOS80, provide utilities for exactly this purpose, viz. TAPE and LMOFFSET respectively. These do not, however, relocate machine language programs in the true sense of the word. They rather displace the program so that it can be LOADED from DOS and add an appendage that is executed first and which moves the program to its correct location in memory before passing control to it.

Modifying machine language programs intended for cassette systems so that they save and load data from disk is possible, but not recommended. A much more expedient method is to buy the disk versions of these programs from the original vendor. To save and load data from BASIC programs is somewhat easier but depends on the given program. The Software Library booklet lists modifications for the disk version of Household Accounts as an example of how it can be done. Note that there is a correction to these in Microbugs (August '82 issue). -Ed.)

## DEPARTMENTS

\*\*\*\*\* KALEIDOSCOPE \*\*\*\*\*

This month's programs for the Colour Computer (Aristocrat and Startrek) show some ways to get around the limiting text display. Although we have received one or two programs from our readers,

we hope to see a lot more in the near future.

Here are some more hints you may find helpful on your Colour Computer.

Don't be alarmed or discouraged if your program produces a syntax error for no apparent reason. Evidently, there is a bug in the BASIC ROM that sometimes causes a program using the PCLEAR statement to be stopped with a syntax error the first time it is RUN. The cure is simply to RUN it again. If you get another syntax error, then you'd better look closely at the line in question.

Although most of the machines in Australia should contain Version 1.1. ROMs, some very early or imported machines may contain Version 1.0 ROMs. There are rumours that the latest machines in the U.S. have 1.2 ROMs and there may be a few here in Australia. To check exactly which ROMs your Colour Computer contains, type 'EXEC 41175 (Enter)'.

If you find the green background colour a bit hard on the eyes then try the following:

POKE 359,57 : SCREEN 0,1 (Enter)

This changes the background colour to orange reasonably permanently. However, if for some reason your computer appears to lock up, then type (even if it doesn't appear on the screen):

POKE 359,126 (Enter)

What has happened is that the screen displays the graphics page and doesn't return to the text page as it would under normal circumstances.

- 0000000000 -

\*\*\*\*\* PEACH BOWL \*\*\*\*\*

Two more programs for our Peach users this month - Aristocrat and Startrek. Originally submitted for the Model 1, they have been modified to run on the Peach. However, a few of our Peach readers have sent in programs and we expect to publish some of these next month.

In September 1982 issue, we published a program for our disk users called Sector Editor. Although this program is a very useful utility with which to explore and repair disks, it has the drawback that the BASIC screen display routines are very slow. Well, one local user by the name of Geoff Drury developed a modification to the original program to speed up the displaying of information. What takes up a lot of time is the conversion of the binary sector data into displayable ASCII data and if this can be done by a machine language subroutine rather than in BASIC, the process is sped up enormously. Below is a list of the modification. Try it and see the difference.

```
50 SCREEN0,,0: CLEAR 4096+128:MCODE$=STR
   ING$(120,"#")
52 MCADDR=256*PEEK(VARPTR(MCODE$)+1)+PEE

## \*\*\*\*\* GROUP ONE \*\*\*\*\*

For our Level 1 users this month we have Starshoot and Compound Multiplication and Long Division, while for our Level 2 readers we present Uranium Core and a utility to provide the DEFUSR statement in non-disk systems.

Reader John Smith has sent in these helpful hints:

In some games and competitive computer activities it is useful to have a limited time for input. This facility is not available as a BASIC function in the TRS-80 machines, although it is available in Assembly on the Model II. This latter doesn't help people like me who haven't yet learned how to use such straining symbolism (!), and is no help to Model I and Model III owners, who, I believe, have no such facility. So I wrote the following BASIC routine to solve the problem. It is quite short and simple. Most of the listing here is REMarks, making the listing self-explanatory. I trust it may interest your readers.

```

100 '          ***** "TIMETRY" *****
110 '   J.D.SMITH, HAWTHORN, SOUTH AUSTRALIA
120 '   <<<<< 6th. March, 1982. >>>>>
130 'This is a means of limiting the time allowed for input to a programme.
140 '
150 REM >>>NOTE<<<: In Level II BASIC the apostrophe (') may be used
160 '   instead of the word "REM". For Level I you have to do a bit more typing
!
170 '
180 '*****Set the parameters*****
190 '
200 SEC = 10 'Time in seconds allowed for an input to be made.
210 LM=4 'LM is the limit on "no entry" loops.
220 TD=SEC*46 'TD is the time delay count. Multiple will depend on
230 '   clockspeed of computer. This suits Models I & III.
240 '   For Model II use a factor of 100 instead of 46.
250 TC=0 'TC is the count of cycles with no entry at all.
260 '
270 '*****This is the time-input loop*****
280 '
290 PRINT"YOU HAVE" SEC "SECONDS TO ENTER A NUMBER OR WORD"
300 TM=0:A$=""
310 I$=INKEY$:TM=TM+1:IF TC=LM THEN 380ELSE IF TM=TD THEN 370ELSE IF I$=""THEN 3
10
320 IF I$=CHR$(13)THEN 470'Note:CHR$(13) is <ENTER>.
330 PRINT I$;
340 A$=A$+I$ 'A$ is used to build up the input string.
350 ' A string is needed for INKEY$. For numerical input use VAL(A$).
360 GOTO 310
370 TC=TC+1:PRINT"TOO SLOW":GOTO 300
380 PRINT"TOO LONG. TRY SOMETHING ELSE!":GOTO 520
390 '
400 '*****End of input loop*****
410 '
420 'It is good programming practice to have an "END" statement only
430 ' at the actual end of the listing. Some computers do not accept
440 ' programme entry or will not list after an "end", so it is good
450 ' practice to either use a "GOTO" as in line 360 above, or
460 ' to use "STOP" to terminate elsewhere than at the last statement.
470 PRINT:PRINT "A$=" A$
480 PRINT "VAL(A$)=";VAL(A$)
490 A=VAL(A$)
500 PRINT"VAL(A$)+2=";A+2:PRINT
510 GOTO 250
520 END

```

- 0000000000 -

## \*\*\*\*\* FORM THREE \*\*\*\*\*

Our Model 3 cassette users should protect high memory and move the DEFUSR routine there. Exclusively for our Model 3 NEWDOS users we present: - Single Key Menu. However, with a little bit of hunting around, I suspect users of other DOS's should be able to adapt it to their system.

A word of caution regarding this last program:-

Changes are made to the Operating System's two most important modules, SYS0 and SYS1. These

should be checked very carefully. These should be checked very carefully. Take note of the author's suggestion and work with a backup copy of your system disk. Also, it may happen that the vendor of the DOS may supply corrective patches that will conflict with these changes sometime in the future. For your benefit record the changes made and keep it in the DOS manual for future reference.

Finally, I wish to draw the attention of our Model 3 cassette subscribers to the Microbug referring to the Movie utility. I hope this has not caused too much inconvenience.

- 0000000000 -

## PROGRAMMING

\*\*\*\*\* TRUE OR FALSE? \*\*\*\*\*

by Noel Rossiter

Power up your trusty TRS-80 Level 2, and when all is READY key in:

```
?(X=0)
```

and quick as a flash, comes the reply:

```
-1
```

Strange? Well, now try:

```
?(X=-1)
```

to which, of course, you get the answer:

```
0
```

To complete the exercise, key in and run the following:

```
FOR I=1 TO 10:X=(X=0):?X;:NEXT
```

and you will get:

```
-1 0 -1 0 -1 0 -1 0 -1 0
```

What you have been doing here is printing the two possible values of the truth function. Enclosing a statement like  $X=0$  in brackets to make  $(X=0)$  is an indication to Level 2 BASIC that the truth of the statement is to be tested, and the appropriate value of the truth function returned; as indicated already, the truth function can only have one of two values, -1 if the statement tested is true, and 0 if it is false.

The statement  $X=(X=0)$  causes X to change its value from 0 to -1 and the reverse each time it is executed, because if X is equal to 0 the expression in brackets is true (truth value = -1) so that -1 is returned and X is put equal to that value; on the other hand, if X does NOT equal 0 the truth function is returned with a value of 0 and X is set to that value. This, of course, can be used to make a flip-flop switch in programs where particular program sequences have to be executed alternately; typically:

```
.....
90 X=(X=0):IF X=0 THEN 200
100.....
.....
190 GOTO 90
200 .....
.....
290 GOTO 90
```

There are other convenient uses of the truth function; try your machine on:

```
X=0:FOR I=1 TO 10:X=X-(I<6)+(I>5):?X;:NEXT
```

You will, by now, be able to figure out that the response will be:

```
1 2 3 4 5 4 3 2 1 0
```

Since the truth function can be multiplied and divided, as well as being added and subtracted ( $Y=5*(X=3)$ ) will return Y with a value of 0 unless  $X=3$  in which case Y will have a value of -5) the truth function offers an elegant alternative to the use of READ and DATA statements to set values on a program. For example, suppose the 27 values of a variable X(I) were to be:

```
1 2 3 4 .....9
10 20 30 .....90
100 200 300 .....900
```

(Don't ask me why), you could set up a DATA statement containing the 27 values and use:

```
FOR I=1 TO 27:READ X(I):NEXT
```

Alternatively, you could omit the DATA statement, and use:

```
FOR I=1 TO 27:X(I)=I-9*(I-10)*(I>10)-90*(I-19)*(I>19):NEXT
```

You can also use the truth function to clip off a variable at maximum and/or minimum values; for example:

```
IF K>60 THEN J=60 ELSE IF K<0 THEN J=0 ELSE J=K
```

allows J to range between 0 and 60 according to the value of K; so does:

```
J=K+(K-60)*(K>60)+K*(K<0)
```

Finally, you can avoid the /0 error by use of the truth function:

```
P=Q/(R-(R=0)) may return a wrong value of P if R=0
```

but  $P=Q/R$  would cause the program to bomb out.

I have not attempted to exemplify all the places in which it may be useful or convenient to make use of the truth function; I have only listed a few cases where I have found it useful. I must admit that minus sign complicates things a bit, and I always have to take a deep breath and work things out carefully. I understand that Level 1 BASIC returns a truth value of 1 if true, and this would make life a little easier. However, the Level 2 arrangement has the benefit of being consistent with the NOT logical operator, because NOT 0=-1 and NOT -1=0. I guess we can't have everything.

- 0000000000 -

#### \*\*\*\*\* MORE ARGUMENTS FOR MACHINE LANGUAGE SUBROUTINES \*\*\*\*\*

by S.H. Liggins

To speed up my BASIC Programs I had often considered including machine language routines, but I didn't like the usual methods of doing it. I wanted the routines to be entirely relocatable and suit machines of any size. I didn't want to worry about setting Memory size, or other fiddling with BASIC pointers. I wanted to be able to include several such routines in the same program without worrying which was where. At times, I also needed to pass more than the single argument allowed by BASIC.

So I decided to store them in integer arrays. The main disadvantage is that they are slightly more tedious to use, as it is necessary to ensure that BASIC doesn't do any sneaky relocation of variables at critical times.

An example is the "BEEP" which I use for error warnings in data entry programs.

##### INITIALISATION:

```
AG% = 0 : AD% = 0 : RE% = 0
```

Argument, address, result variables

```
READ I : DIM BP%(I)
```

Define array to store the routine

```
FOR J = 0 TO I  
  READ BP%(J)
```

Store the routine

```
NEXT J
```

```
DATA 30,4120,32717,15882,2049,9038,9054,-9755,-9759,1816
```

```
DATA 32717,-20736,19720,31068,-14153,-18565,16072,17154,
```

```
DATA -43,-496,8253,3576,-3296,-18680,456,-1,12321,2304,
```

```
DATA -712,6361,-52,-1
```

##### SUBROUTINE:

```
(AG% already set up with frequency * 256 + duration)
```

```
AD% = VARPTR(BP%(0)) : DEFUSR=AD% : RE% = USR(AG%) : RETURN
```

From the above the persevering reader will notice that the DATA statements contain 2 byte integer values to be read into array BP% rather than 1 byte values to be POKed into memory.

It is important that no variables be created between the DEFUSR statement and the USR statement. I created all the variables in the initialisation routines to be on the safe side.

A second example is the familiar 'store/restore screen display' problem. It is a simple bulk move, requiring three arguments, source address, destination address, and number of bytes. Each argument is stored in the appropriate part of the MV% array.

##### INITIALISATION:

```
VD% = 15360 : AD% = 0 : RE% = 0
```

Video addr, M/L addr., result variables

```
DIM ST%(512)
```

Storage for screen (= 1024 bytes)

```
READ I : DIM MV%(I)
```

Define array to store the subroutine

```

FOR J = 0 TO I
  READ MV%(J)                                Store the subroutine
NEXT J

DATA 0,8448,0,4352,0,256,0,-4664,-13904

STORE SCREEN:
MV%(1) = VD%                                Source
MV%(3) = VARPTR(ST%(0))                      Destination
MV%(5) = 1024                                Length
AD% = VARPTR(MV%(0)) : DEFUSR = AD% : RE% = USR(0) : RETURN

RE-DISPLAY SCREEN:
MV%(1) = VARPTR(ST%(0))                      Source
MV%(3) = VD%                                Destination
MV%(5) = 1024                                Length
AD% = VARPTR(MV%(0)) : DEFUSR = AD% : RE% = USR(0) : RETURN

```

Curious readers will be wondering why the arguments are stored in MV%(1),MV%(3) and MV%(5). This is because the actual machine language code is as follows:

```

NOP      LD HL, source
00      21      ssss
MV%(0)..... MV%(1)

NOP      LD DE, destination
00      11      dddd
MV%(2)..... MV%(3)

NOP      LD BC, length
00      01      1111
MC%(4)..... MV%(5)

LD A,B   OR C   RET Z   LDIR..... RET
78      B1      C8      ED      B0      C9
MV%(6)..... MV%(7)..... MV%(8).....

```

Note: Non-disk users will have to POKE AD% into 16526,16527 as usual instead of DEFUSR = AD%

## REVIEWS

\*\*\*\*\* PYRAMID 2000 BY RADIO SHACK \*\*\*\*\*

A Review by Brian J. Fillery.

I had read a couple of reviews of Pyramid before I got the chance to really try it out myself. The first was written by someone who obviously did not like adventure games, and he damned it out of hand. The second review was kinder and gave me hope. Needless to say, neither of these reviews were in MICRO-80 nor were they Australian.

I can get as frustrated as the next man, so I was wondering what I would do with Pyramid. Well, I did get frustrated, but isn't that what the game is about? Truthfully, it is a difficult game for those with no ingenuity. You have to use your brain to do things, to work it out.

When the game starts, you find yourself outside an entrance to a Pyramid (where else?). You have to communicate with your Astral self, they say in the large book that comes with the game. It is large in size, but tells you very little of use. Hence, use your brain!

Whilst I was playing the game, I felt hampered talking in two-word sentences to my Astral self so I decided that it was a rather dim robot instead. This suited my personality.

The first thing that comes up is a message. "Welcome to Pyramid"...then nothing happens. In desperation one presses ENTER and the game starts. You instruct your robot/astral self to 'go in' and from there on, you are on your own. There are serpents, gold nuggets, rooms with hieroglyphics, bottomless pits, but you use your wits to get you round. If you have any sense, you will make a map of your various turns, so you know where you are.

There are various things you can do with two-word sentences. You can go, get, drop, look, take, climb, throw, etc. If you're not sure what you have collected, you can take 'inventory' and 'score' will tell you how badly you are doing.

There are apparently about 30 rooms and one 10 room maze. I didn't get much further than about 6 rooms, but time was not on my side and I didn't make a map, which was stupid. Was it my imagin-

ation or did the rooms change round the second time I played it?

If you are desperate you could try peeking into the game to find out how it works and what all the right words are, but then what is the point of playing it?

This is an adventure game. It is hard for some and easy for others, but it will certainly keep you entertained for a long time to come.

\*\*\*\*\* MICROSOFT TYPING TUTOR \*\*\*\*\*

A Review by A.F.J. Bell

This cassette based program requires 16K, and comes from the producers of the BASIC used in the TRS-80, and of such great programs as EDTASM Plus and ZBUG. My copy cost \$19.95.

It comes with an excellent 20 page manual which simply and clearly explains what the program does and why, how to set the program up, and how to use it. It also has some hints on good typing.

At the beginning of the program one is offered the options of learning letters, numbers, or symbols. After the computer sets itself up, one is offered the option of "Typing Tutor" or "Practice Paragraph".

If one chooses Typing Tutor, two blocks of four randomly chosen characters will be displayed on the screen with the cursor underneath showing that one has to type the indicated lesson. The lessons are set out so that the easiest characters are practised first. At the end of the blocks a new lesson is generated, depending on the results of the previous lesson. That is, if one is typing a given character accurately and quickly, then it is removed and replaced by another character. After 10 lessons the computer gives a progress report, and then allows the options of slower, same, or faster response, or of Practice Paragraph. If Practice Paragraph is chosen, the computer will generate a several line paragraph using only the characters already practised, and one types the characters displayed just as in the Typing Tutor option. At the end of the Practice Paragraph one's results are analysed and displayed, and the options of Typing Tutor and Practice Paragraph are again allowed.

I found this an easily understood and enjoyable to use program, and had no difficulty putting it on ESF wafer. Better still, it helped me to increase my speed and accuracy. I strongly recommend it.

## HARDWARE

\*\*\*\*\* THE DREADED REBOOT \*\*\*\*\*

by R.G. Burgin

I wonder how many of us have been typing away on a Model I TRS-80 only to suddenly have the disk drive start up and have the whole system reboot for no apparent reason? Of course, there is always a reason. It is just that us mere mortals have a little more trouble finding it than the computer gods who write the magazines but fail to give us answers we can access.

My system on 48K, LNW expansion, MPI B92, and Dick Smith Printer under NEWDOS 80 V2 gradually developed the dreaded reboot to the point of being almost unusable. I believe the problem is almost unknown if the keyboard is used alone. It certainly never happened to me when I only had 16K. It seems obvious that the more that is hung onto the system, the more prone it is to trouble. Well, Tandy did introduce the Model III for some reason, didn't they? I don't think they really care about RFI or the Model I wouldn't be, would it?

OK, the increased number of bits and pieces in an expanded system will unfortunately add to the number of spontaneous reboots; after all, there's more for the odd cosmic ray to hit. It only takes one bit in the 48K of RAM to be a little doubtful and bingo! Even if it doesn't reboot, the CPU is off in never never land, ignoring the keyboard.

You and I can't do anything about the acts of God like the above, but you sure can take the steps I took to ease my problems. The first area to look at is the push on edge card connectors tying the system together. Good practice says that all the contacts should be gold-plated to prevent corrosion. After all, we are dealing with radio frequency currents at very low power levels so corrosion is almost guaranteed. So why didn't Tandy gold-plate the connectors? It wouldn't be too expensive when the PCB was bare. After all, the plug makers can do it and their prices aren't too bad.

You can pull everything to bits and clean the contacts with a pencil eraser - it works, for a while. Don't forget the disk drive and printer connectors. KEEP OUT of the disk drive - its makers weren't so frugal - the contacts here are gold-plated. If yours aren't, have a good think about what the rubbings from the eraser could do inside before having a go.

If you read any of the American magazines on computing, no doubt you will have seen methods of gold-plating the contacts of existing PCB's. Forget it! To buy the chemical needed would cost in the region of \$400.00 in Australia plus some gold. I know, I spent a small fortune in phone calls to find out.

There is advertised in the American magazines another fix called Gold Plug 80 for about \$10 US per plug for which I very nearly sent off the money. But would I get it sent to a foreign country, and even if it is a reputable company, how long would it take? The solution, however, is a lot nearer to home than that. Strangely (? - Ed.) it was MICRO-80 themselves who solved my problem. I was in their office having a quiet snoop and decided to have a bit of a grizzle about the problem when they suggested I go and see Grantham Pty. Ltd., in Gilles St. Adelaide.

These good people produced a connector strip of 80 gold flashed contacts which can be cut off at the desired length and soldered to the existing contracts. The strip is coded S-700 QQ 170 and was less than \$25 when I got mine. I have had no further reboots caused by bad cable connectors since fitting these gold contacts. Power line surges have been the cause of some further problems but if the Editor is willing, we might be able to discuss that another time.

(Certainly. By the way, Grantham Pty. Ltd. is now known as Magmedia at the same address - Ed.)

\*\*\*\*\* MICROBUGS \*\*\*\*\*

Although we make every effort to ensure accuracy in the material we publish, inevitably errors and omissions will occur. In this section, we print corrections to those bugs that have been reported.

CHECKSUM Vol. 3, No. 11 October 1982 pp.31-32.

The source listing printed in the magazine is for the disk version of the program. The Level 2 version should have the following changes made:

- (1) in line 250, the Origin should be 41E2H.
- (2) in line 100C, the Origin should be 428AH.

MOVIE FOR MODEL 3.

The modified version of MOVIE for the Model 3 that appeared on the October 1982 cassette was not the final version and does not work on the Model 3. This month the cassette includes the correct copy of MOVIE for Model 3 users. The October 1982 disk contained the final version and is not affected by this correction.

\*\*\*\*\* USERS' GROUPS \*\*\*\*\*

The following is a list of User's groups of which we are aware. Many are interested in a wide variety of computers. For further information about any of the groups, contact the person indicated. If you have a group not mentioned here, please let us know so that it can be included in this section.

\*\* AUSTRALIA \*\*

AUSTRALIAN CAPITAL TERRITORY

CANBERRA GROUP

Cont: Bill Cushing  
10 Urambi Village, Kambah, 2902.  
Meet: 3rd Thurs. monthly, 7.30pm  
Urambi Village Comm. Centre.  
Crozier Circuit, Kambah.

NORTHERN & WESTERN SUBURBS COMPUTER USERS GROUP

Cont: David Coupe, Tel: (03) 370 9590  
Meet: CPM Data Systems, 284 Union Rd.  
Moonee Ponds. Alt. Thurs. 7pm.

PENINSULA COMPUTER GROUP

Cont: George Thompson, 3 Patterson St.  
Bonbeach, 3196. Tel: 772 2674.  
Meet: 2nd Tues. monthly, Chisholm College,  
Frankston.

NEW SOUTH WALES

BLUE MOUNTAINS OF N.S.W.

Cont: Greg Baulman  
Tel: Home (047) 51 3221  
Meet: 1st Fri. monthly, 7.30pm  
Springwood Civic Centre.

TRS-80 SYDNEY EASTERN SUBURBS USERS GROUP  
MAPPER CP/M USERS GROUP

Cont: Dan Lawrence  
 G.P.O. Box 2551, Sydney, 2001.

WOLLONGONG GROUP

Cont: Paul Janson  
 P.O. Box 397, Dapto, 2630.

COMPUTERTOWN CAMDEN

Cont: Keith Stewart,  
 P.O. Box 47, Camden, 2570.

NEWCASTLE MICRO USERS GROUP

Cont: Dennis Jackson,  
 Tel: (049) 63 1910  
 Meet: Last Wed. monthly 7.30pm, Hall, Cnr.  
 Fowler and Ogen Sts., Hamilton Sth.

PEACH USERS GROUP

Cont: 120 Lawson St. Redfern, N.S.W. 2016

SYDNEY PEACH USERS GROUP

Cont: 261 Northumberland St.  
 Liverpool, N.S.W. 2170.

VICTORIA

BALLARAT COMPUTER USERS GROUP

Cont: John Preston, Tel: (053) 31 4363  
 Meet: 1st Wed. monthly at 7.30p.m.  
 Various venues - refer above.

EASTERN SUBURBS USERS GROUP

Cont: John Fletcher  
 Tel: Home (03) 737 9544  
 Bus (03) 89 0677 (9-4)  
 Meet: 4th Wed. monthly, 7.00pm. Kingswood  
 College, 355 Station St. Box Hill.

GEELONG COMPUTER CLUB

Cont: P.O. Box 6, Geelong, 3220.  
 Meet: 2nd Thurs. monthly, Tybar Engineering  
 Hampton St. Newton.

MICROCOMPUTER CLUB OF MELBOURNE

Cont: MICOM, P.O. Box 60, Canterbury, 3126  
 Meet: 3rd Sat. monthly, 2.00pm. Burwood  
 State College, Burwood Hwy.

**SOFTWARE**

## \*\*\*\*\* STAR TREK (Colour) by R.O. Edwards \*\*\*\*\*

This game of Star Trek has comprehensive instructions built into the game which need not be repeated here. The Colour Computer version has a couple of modifications in it that were necessary due to the small screen size. All of the computer responses to your actions will scroll across the screen in a small window; this response will only be replaced when you take any action that requires a new response. Also, the Galaxy Map, (being about three times the width of the normal screen), can only be viewed a portion at a time. Think of your screen as a window and using the arrow keys, move this window left and right to view the required portion of the Galaxy map page. One further note for the Colour Computer version: the program has a POKE that gives text on an orange background. If the program terminates by its intended means, the original value at the POKE address will be restored. If you should 'BREAK' the game, then it will be necessary to perform the following:

POKE 359,126

This will restore the green background; failure to do this could cause the computer to appear to lock up; if it does, you can still blindly type the above (though nothing will appear on the screen until you press ENTER). This will restore the screen to normal.

- 0000000000 -

## \*\*\*\*\* THE ARISTOCRAT (Colour) by R. Dyball \*\*\*\*\*

The Aristocrat is a poker machine for the Colour Computer and the Hitachi Peach. In each version you start with a credit of \$10; to start the game you press the space bar. To start a new game you press ENTER/RETURN. The Colour Computer version has coloured blocks instead of letter symbols; the colours correspond to the symbols in the following manner:

YELLOW = 10 (TENS)  
 BUFF = J (JACKS)  
 BLUE = Q (QUEENS)  
 RED = K (KINGS)  
 BLACK = A (ACES)

The payouts for each version are the same. The Colour Computer version has sounds for the reels turning, the handle being pulled down and the coins dropping into the tray. The Hitachi version has a simple tone that is sounded when the reels stop spinning. In each version play continues until you run out of money.

- 0000000000 -

## \*\*\*\*\* URANIUM CORE - LII/16K by D.S. Stevens and B. Thomas \*\*\*\*\*

NOTE: This program is strictly for Level II.

Uranium core is set sometime in the future. Earth is rapidly running out of natural resources. Your mission is to retrieve the uranium cores found in the second universe and return them to our universe via the universe interface. Your mission will be deemed unsuccessful if no cores are present in the pod bay.

Your ship is the new 'Vectored Probability Shift Pod' and it uses V.P. shifts to move. To slow forward movement, you must select reverse. Likewise with up: select down to slow movement (and vice-versa).

You have only one life, so be careful! Watch out for unstable neutrino webs and black holes!

## PROGRAM BREAKDOWN.

Lines 10-120 Program title and authors, system type input.  
 140-150 Print @ position conversion.  
 160 Move player.  
 490 Unsuccessful mission.  
 500 Successful mission. Calculate new fuel, reset velocity, increment level.  
 550 Explosion routine. Print "Game Over".  
 580 Read machine language data and create strings, define variables.  
 700 Start game, draw screen.  
 780 Calculate new core position, set black hole if necessary.  
 850 High scores.  
 880 Print high score congratulatory message, wait for player to input name or initials. Calculate player's position in high score array.  
 890 Print high score table.  
 1000 Print title page and await input (for instructions or game).  
 1230 Print instruction page and await input (to start game). (No input, so go to title page again).

The program uses SET (X,Y) co-ordinates and these are converted to give ?@ position. There are three machine language subroutines used by this program. The explosion routine is memory dependent so this routine may not be put elsewhere, but the sound and inverse screen routines are relocatable code, so you may move them if they conflict with any routines you like to have in your computer. Don't forget to rest the memory size!

- 1) EXPLOSION ROUTINE resides from 32305 to 32651
- 2) SOUND ROUTINE resides from 32688 to 32716
- 3) INVERSE ROUTINE resides from 32717 to 32767

## STRING DATA

LB\$ = <u>L</u> ong <u>B</u> lank	WB\$ = <u>W</u> eb
UT\$ = <u>U</u> ranium <u>C</u> ore <u>T</u> itle	P\$ = <u>P</u> layer's <u>S</u> hip
VB\$ = <u>V</u> ertical <u>B</u> order	UC\$ = <u>U</u> ranium <u>C</u> ore
HB\$ = <u>H</u> orizontal <u>B</u> order	BH\$ = <u>B</u> lack <u>H</u> ole
TB\$ = <u>T</u> op <u>B</u> order	B\$ = <u>B</u> lank

## VARIABLE DATA

C1 = Arrow key location	SC = Score
C2 = and keys location	PX = Player's X position
C3 = Start of screen memory	PY = Player's Y position
C4 & C5 = USR entry points	PP = Print position (calculated from PX and PY)
I = Inverse constant for C4	XV = X Velocity
M = Sound constant for C4	YV = Y Velocity
EX = Explosion constant for C4	FP = Fuel Pointer
LV = Level	GF = Grapple Flag.

If you have any queries about this program, please don't hesitate to contact me. HAVE FUN!!

- 000000000 -

\*\*\*\*\* SINGLE KEY MENU - MODEL 3 DISK by S.J. Turtle \*\*\*\*\*

NOTE: This program is strictly for Model 3 Disk users and requires NEWDOS 80.

This is one for those people who get callouses on their fingertips from typing in all those DOS commands so necessary to get anything out of their machines.

When correctly set up, this program displays a list of up to 16 of your most commonly used programs and/or commands with a pointer which can be moved up or down to point to any one.

All the user needs to do is to move the pointer, using the up or down arrow key to the required command and press (ENTER) ... the command is then executed as if it had been typed in at NEWDOS 80 READY. Pressing the (CLEAR) key restores the usual NEWDOS 80 READY command mode, which is also the default after any DOS command has been executed.

The correct setting up of this routine requires that you are familiar with, and have available

an editor/assembler and SUPERZAP as some minor changes must be made to two system programs, namely SYS0/SYS and SYS1/SYS.

The first thing to do is get MENU into your machine, either by typing in the source code through an editor/assembler or by loading it from a MICRO-80 disk or cassette. I would recommend typing in the source code and saving it as it is necessary to use the editor/assembler to write your own commands into the menu ...more about that later. Save the source and assembled object code to disk ...it is necessary to have object module on the system disk.

\*\*\*\*\* BEFORE GOING ANY FURTHER make a backup copy of your system disk and use it to make the system program changes on, as any errors will render it useless until they can be repaired using Superzap. \*\*\*\*\*

Next enter SUPERZAP.....

- 1) Type DFS (ENTER)
- 2) Respond to FILESPEC? with SYS0/SYS
- 3) Respond to RELATIVE SECTOR #? with 8
- 4) Type MOD92 (ENTER)
- 5) Change 01 00 B2 4B to 01 FA B2 4B and save the change to disk
- 6) Move to the next sector...FRS 9
- 7) Type MOD8D (ENTER)
- 8) Change 00 00 00 00 00 00 01 00 B0 4C 00 to 01 05 00 F2 C3 40 00 01 FF B1 4C and save these changes to disk.
- 9) Press X to return to SUPERZAP menu.
- 10)Exit SUPERZAP and REBOOT THE DISK.

Now re-enter SUPERZAP and...

- 1) using the method in 1 to 3 above go to sector 1 of SYS1/SYS.
- 2) Type MOD2A (ENTER)
- 3) Change C3 40 00 to C3 00 F2 and save to disk.

You can now exit SUPERZAP...

If all is well you shouldn't notice anything! However, if you have made an error there are three most likely symptoms - first the screen will go blank except for NO SYS in the top left corner (you probably messed up number 5) or SYSTEM PROGRAM NOT FOUND repeatedly after a successful boot or constant reboots (you probably forgot number 8).

When NEWDOS 80 READY appears type MENU or LOAD MENU/CMD and press (ENTER) then when NEWDOS 80 READY returns press (ENTER) again and the menu should appear.

If you have made any mistakes with zapping the system programs, you probably won't have made it this far, so any faults from now on are most likely in MENU/CMD itself.

You will, of course, want to change your menu to suit yourself. This is best done using the editor/assembler - you will find in the source code all the commands in DEFM statements ORIGINATED at F2FOH - by changing these to what you want and reassembling the program you can include any DOS command string that is permitted under NEWDOS 80, up to 40 characters long which is ample for most, if not all, needs.

To change the program it is only necessary to alter the MENU/CMD program. You never need to change the system programs once they have been set up, and the disk will still operate quite happily without the menu resident, provided you never overwrite the three byte jump at F200 ...for this reason I recommend using an AUTO chain routine that sets HIMEM to F1FEH and automatically loads MENU/CMD.

#### HOW IT WORKS

SYS1/SYS is the overlay module which is used to 'interrogate' the DOS commands and act upon them. It usually jumps to a ROM line input routine at 0040H from 4E24H. SYS1/SYS is only in the system when a DOS command is entered. In order, therefore, to permanently change this vector to the MENU routine, it is necessary to change SYS1/SYS itself - that is, the second of the two zaps - we alter the jump to 0040H (C3 40 00) to F200H, the entry point of MENU (C3 00 F2). Now we are left with a problem. If we try to boot the disk with that change only control will jump unconditionally to F200H every time, whether anything is there or not, hence constant reboots.

To overcome this situation we make a change to SYS0/SYS which is the module loaded first to set up the DOS vectors and the entire DOS environment. This change consists of placing three bytes at F200H to branch control back to 0040H until we get MENU Loaded - this is the first of the zaps.

A quick note here about disk file formats to enlighten the now totally confused novices - each block of code on a disk file contains a header of 4 bytes to tell the computer...

- 1) where to put it, and

2) how many bytes to put.

i.e. in our zap 01 05 00 F2 C3 40 00 means....

01 - this is a new section

05 - there are 5hex bytes including the two address bytes (the maximum is 00hex which equals 256)

00 F2 - where to put it...the address in LSB/MSB format, i.e. F200H

C3 40 00 - the code to be put, i.e. JP 0040H

The other four bytes 01 FF B1 4C were needed to load the next block, one byte of which we borrowed for our zap.

For anyone who would like to know more about disk files etc., I would recommend 'TRS-80 DISK AND OTHER MYSTERIES' by H.C. Pennington, which describes all types of disk files in great, yet easy to understand detail. (It is available from MICRO-80 for \$27.00 and well worth every cent).

The only other zap to SYS0/SYS is to allow for the 6 bytes we borrowed from the last block.

The operation of MENU/CMD itself is fairly straight-forward and I won't discuss it in detail. The program listing documentation covers most of it. Basically the DOS routine at 4E24H jumps to F200H, the entry point for MENU which tests for a key input. If the key is anything other than (ENTER) it saves it and jumps to ROM at 05E3H to get the rest of the command and then continues as if MENU was not resident. If the key is (ENTER) it clears the screen, writes the menu and waits for up or down arrows, (ENTER) or (CLEAR). The arrows move the pointer in the appropriate direction, the (CLEAR) key clears the screen and returns control to the DOS routine by jumping to 0040H, the original branch in the unaltered DOS, whereas the (ENTER) key causes MENU to load the command to which the pointer is pointing into the input buffer at 4225H and then jumps back to DOS at 497BH, where it usually would after getting a command from the keyboard. DOS then continues as if the command had been typed in normally until it again arrives at 4E24H where the cycle starts again.

When in the menu mode it is possible to enter the usual command mode simply by pressing (CLEAR). After each command is completed the system is in this command mode. To enter menu mode simply press (ENTER) before any other key.

To change your menu, load the source code into your editor/assembler and alter the DEFB statements at the bottom of the listing. Always place a DEFB 0FFH after the last DEFB 00 byte to mark the last line of the menu, whether you have 16 entries or not. This is to stop the pointer at your last one and save it trying to point past the end of the screen.

\*\*\*\*\* DEFUSR - LII/4K by Roger Bowler \*\*\*\*\*

NOTE: This program is strictly for Level II only.

This article describes an extension to Level II BASIC which should be of interest to anyone who makes USR calls from BASIC but particularly to those with a future move to Disk BASIC in mind.

If you ever upgrade your tape-based TRS-80 to a disk system, you will be pleased to find that Disk BASIC is generally "upward compatible" with Level II BASIC - that is to say, any program written according to the rules of Level II BASIC will normally run unchanged under Disk BASIC. This is very useful, because it means that you won't have to make any alterations to your existing programs to make them work on a disk-based TRS-80 system.

There is, however, one annoying exception to this rule, and it affects programs which call machine-code ("USR") subroutines. Level II BASIC and Disk BASIC use different methods for defining the entry address of a machine-code routine. Under Level II BASIC, you have to break the USR routine's address into its least-significant and most-significant bytes, and POKE these values into locations 16526 and 16527 (decimal) respectively, whereas Disk BASIC provides you with the somewhat more elegant DEFUSR statement.

The following example illustrates the two methods of defining the entry address of a USR routine starting at address 7D00 (32000 decimal).

Level II BASIC.....POKE 16526,0: POKE 16527,125

Disk BASIC.....DEFUSR=32000

What this means is that before you can run your Level II programs under Disk BASIC you have to go through them and convert all the POKE 16526 etc. lines into DEFUSR= statements. If you forget to do this, then not only will the program not work, it is quite likely that the POKE's will cause internal errors in the interpreter.

The ideal solution to this problem would be to provide Level II BASIC with the capability to handle the DEFUSR statement. Then you could write all your programs using DEFUSR, in the knowledge that they will work equally well under either BASIC. In fact, this turns out to be simpler than it sounds; it can be done by adding as little as 16 bytes of machine code to the Level II interpreter.

The first program listing shows the assembly source of the code necessary to interpret DEFUSR statements. (If you are not interested in how it works, you can skip the rest of this paragraph, which gives a brief outline of the routine's internal logic). The Level II interpreter takes a call to location 4158H whenever a statement beginning with DEF is encountered in a BASIC program. Normally this location contains a jump to a routine which issues the ?L3 ERROR message, but we shall overlay it with a jump into our routine instead. When the call is made, the HL register points to the location within the BASIC program which follows the word DEF. Our routine first checks that the next two words in the program are USR and = (?SN ERROR is issued if not), then it evaluates the expression following the =. The integer value of this expression is stored at locations 408E/FH (decimal 16526/7), thus defining the USR entry point. Finally, a return is made to the Level II interpreter with HL pointing to the end of the statement. Most of the processing is done by ROM calls which are more fully described in MICRO-80's LEVEL II ROM REFERENCE MANUAL. It is the power of these ROM calls which makes the DEFUSR routine so compact.

To implement DEFUSR, all you need to do is to poke the 16 byte program somewhere untouched by Level II (I suggest 4040-404FH which are used by Disk BASIC for storing the date and time), and place a jump instruction to it at 415BH. The BASIC program shown in the second program listing will do this for you. Lines 20 to 50 store the machine code in low RAM locations 4040-404FH and line 60 alters the last two bytes of the JP instruction at 415BH to jump to 4040H. Run this program once, and the computer will remain set up to accept programs containing DEFUSR statements (although you will have to rerun the program each time you power on the computer).

The third program listing is included as a demonstration to allow you to try out DEFUSR. All it consists of is the machine code from the 'white-out' program (given as a sample USR routine in section 8 of the TRS-80 Level II BASIC Manual) but the POKE 16526 etc. line has been replaced by a DEFUSR= statement. To use this program, power up the computer with a MEMORY SIZE of 31999, run program 2 to enable DEFUSR, then run program 3. The result is not particularly exciting but no doubt you will have plenty of programs of your own which will benefit from DEFUSR in a more spectacular way.

\*\*\*\*\* COMPOUND MULTIPLICATION AND LONG DIVISION - LI/4K \*\*\*\*\*

by C. Stobert

This program was developed to generate problems for practice in long division and compound multiplication using conventional layout and procedure.

The introduction is sketchy as only 20 bytes of memory remain. No short cuts have been taken with punctuation so some extra memory may be found this way, though I prefer to "stay with the book".

The program selects numbers and presents them in calculation format and the answers are entered in turn as per conventional procedure.

Each sequence consists of ten separate problems and any treated incorrectly are repeated. The "mark" calculation is accurate for reasonably few errors as the counters calculate only the number of "turns" and "total correct".

Lines 5-120 Presents nominal introduction and selects type of problem to be processed.

200-270 Presents varying approvals if solution is correct.

280-350 Presents varying personal introductions to break the monotony (not as grand as L II with sound but LI-4K does have its limitations).

400-460 Selects the operating numbers for multiplication problems and breaks them into their component units, tens, etc. for placement in the operating format.

470-520 Places the numbers in the screen format and completes the detail with appropriate underlinings and operating sign.

560-640 Places the input prompt at the appropriate operating place in the format and then after each input replaces numbers removed by the scroll.

The program loops until all four input lines have been completed. The last input includes the units, tens, etc. components of the attempted result.

650-660 Accepts input of  $\times 10^3$  and  $\times 10^4$  components as appropriate.

670-680 Calculates result of input and compares with correct result.

690-720 Assigns program to problem repeat, new problem or conclusion as appropriate.

800-840 Conclusion sequence.  
 900-940 Data lines for location of format layout and 1st - 4th input lines respectively.  
 950-990 Subroutine to replace inputs removed by scrolling.  
 1300-1340 Subroutine for input of answer sequence for long division problems.  
 1400 Removes multiplication data locations to allow access to Data for long division operations.  
 1410-1465 Selects divisor and dividend and breaks them into component units, tens, etc.  
 1470-1590 Places working numbers in location on the operating format.  
 1600-1650 Completes format with appropriate separating lines.  
 1680 Inputs first portion of quotient (hundreds).  
 1690 Inputs first entry calculation and remainder.  
 1700 Transfers next number down from dividend.  
 1720-1780 Sequences input to final remainder calculation proceeding as above.  
 1800 Calculates final remainder.  
 1840-1850 Calculates answer and compares with the correct result.  
 1860-1890 Directs program to new problem etc.  
 2000-2060 Data for long division operating locations.

\*\*\*\*\* STARSHOOT - L1/4K by M.S. Young \*\*\*\*\*

This program is an L1/4K version of the game as in MICRO-80 July, '81. The object of the game is to get a pattern of stars as shown below from the initial position, by shooting stars. Only stars can be shot. A star is shot by entering the number of its position. When a star is shot the pattern will change, depending on which star is shot.

.	.	.	*	*	*	1	2	3
.	*	.	*	.	*	4	5	6
.	.	.	*	*	*	7	8	9
Start			End			Layout		

The above layouts are on the screen throughout the game for reference.

#### EXPLANATION OF PROGRAM

The board for the game is stored in an array A(1) - A(9). The value depends on if a star or a dot is in that position (1 or -1 respectively). A "second" array is used to store the print positions A(11) - A(19) for positions 1-9. The actual positions on the screen are READ from the DATA in line 9999.

Lines 1001 - 1009 make the changes for a shot in positions 1-9. The line is selected in line 580 with ON S GOSUB ....

Lines 2000 - 2050 print the board and determine the position of the game. Variable E is used for the status of the board.

If E = 7 (8 stars and 1 dot) AND the centre position A(5) is a dot, the game is completed (Line 620).

If E = 9 (9 dots no stars). This is also an end of the game, as no stars are left to shoot (Line 600).

Lines 3000 - 3160 print the instructions.

Lines 4000-4060 print the layouts.

The game can be completed in 11 moves, but bad shooting may clear the board and end the game. Good Luck!

The line numbers may look rather odd, but there is a reason for the numbers used.

The main program starts at line 500 and other sections start on lines 1000, 2000, 3000 and 4000.

I find it easier to follow the logic used in a program if the lines are numbered in this way rather than starting at line 10 with an increment of 10.

## MICRO-80 PRODUCTS CATALOGUE

This catalogue contains a selection from the wide range of peripherals, interfaces, computers and software carried by MICRO-80 for your computer. If you don't see the item you want, contact us, we probably have it anyway!

MICRO-80 has been supplying customers throughout Australia and the Pacific region by mail-order for 2½ years. Our customers find this a simple and efficient way to do business. You may place your order by telephone or by mailing the order form from any issue of MICRO-80 magazine. Generally, it takes about one week from receipt of order until despatch. You should allow 2-3 days for your letter to reach us and 7-10 days for the parcel to reach you, making a total turnaround time of 2½-3 weeks.

### WARRANTY AND SERVICE

All hardware products carry a 90 day parts and labour warranty either from the manufacturer/distributor or from MICRO-80 Pty Ltd. In many cases, warranty servicing can be arranged in your own city, otherwise goods will be repaired by our own team of technicians in our Adelaide workshops.

### TRADE-INS AND TERMS

MICRO-80 can accept your existing equipment as a trade-in on new equipment. We can also arrange consumer mortgage financing or leasing on larger hardware purchases. Contact us for details.

---

## LNW SYSTEM EXPANSION II

### for the Model 1.

The LNW Expansion for the Model 1 comes fully assembled in an attractive, heavy gauge steel case, complete with power supply and full documentation. High quality construction throughout, the Expansion II features a full 32K of 200ns RAM, RS-232-C and printer interfaces, gold-plated connectors and a floppy disk controller.

**PRICED AT \$550 plus \$10 freight**

---

## PRODUCTS FOR THE LNW80 COMPUTERS

### SOFTWARE:

**CHARM \$55.00 plus \$2.00 p&p**  
A programmable character generator for designing character sets, symbols and graphic characters with a maximum of ease and flexibility.

**AUTO PLOT \$125.00 plus \$2.00 p&p**  
Autoplot enables you to make use of the high resolution capability of the LNW 80 more easily, with the ability to produce hard copies on a suitable printer with bit mapped graphics.

### AVAILABLE SOON:

LNW Research Corp. has announced the release of several new products for their range of LNW80 Computers:

- **CP/M Upgrade Kit**  
To upgrade LNW80 "kit computers" to 96K of RAM and provide CP/M operation. This kit consists of a CP/M adaptor board, 64K of RAM, installation instructions, CP/M2.2 diskette and LNW CP/M manual.
- **LNW LDOS**  
A new LDOS operating system for the LNW80 Model 2 providing software compatibility with the TRS-80 Model 3. Users with the new CP/M upgrade kit will also be able to run the new LDOS.
- **CP/M Plus**  
CP/M Plus (or CP/M 3.0) is the latest version of the CP/M operating system and includes a CP/M Plus diskette and manual.

*All prices include Sales Tax and are subject to change without notice. Some items are in limited supply. All equipment carries MICRO-80's Australia-wide 90 day warranty covering parts and labour.*

---

# Introducing the NEW LNW80 MODEL 2

The new LNW Model 2 is not just a microcomputer but a complete computer package that includes excellent hardware, extensive systems software and a range of application software. Manufactured by LNW Research Corporation, the LNW Model 2 features:

## HARDWARE:

- 4MHz Z80A microprocessor with 96K user RAM.
- 16K x 6 bits Graphics RAM, expandable to 64K (four pages).
- Printer, RS-232-C and cassette interfaces.
- 12K BASIC in ROM (Level 2 compatible).
- Support for single/double sided, single/double density, 5¼" or 8" disk drives.
- Full TRS-80 Model 1 compatibility.
- Hi-res Colour (RGB) and B & W video outputs.
- Four Hi-Res Graphics Modes:
  - B & W 128 x 48
  - B & W 480 x 192
  - 8 colour 128 x 192
  - 8 colour 480 x 192
- Three text displays Modes:
  - 64 char x 16 lines
  - 80 char x 16 lines
  - 80 char x 24 lines

## APPLICATION SOFTWARE:

1. LNW Small Business and Professional Accounting Series — *including General Ledger, Accounts Receivable, Accounts Payable and Payroll (U.S.A. conventions).*
2. Electric Spreadsheet — *for financial planning and forecasting.*

## SYSTEMS SOFTWARE:

- LNWBASIC 4.0 — an extension to disk BASIC that allows full use of the LNW80's graphics capabilities through the addition of powerful graphics commands such as CIRCLE, COLOR, DRAW, etc.
- DOSPLUS 3.4 — the fast, reliable and easy-to-use operating system that provides all the file control and disk management you need for maximum benefit from your disk drives as well as an enhanced disk BASIC.
- LNW-CP/M — the CP/M operating system opens the door to a whole new world of software. LNW-CP/M was designed to be compatible with application programs written for CP/M 2.2 and provides the user with a 61K system

3. Electric Pencil — *an easy-to-use word processor.*
4. Microterm — *an intelligent terminal program for communications.*
5. Chart-Ex — *allows you to transform your data into pie, line or bar charts on hi-res display or printer with bit graphics.*

The LNW80 Model 2 is perfect for the serious hobbyist or businessman seeking a higher performance, more reliable computer to replace his TRS-80 Model 1 without sacrificing a huge investment in software and programming experience.

LNW80 Model 2 computer	\$2,850
<i>(complete except for disk drives and monitor)</i>	
HI-RES Green Phosphor Monitor	\$265
Super HI-RES Hitachi RGB Monitor	\$1,250
Two Single-sided 40 Track Double Density Disk Drives	\$825
<i>(in cabinet with power supply and cable)</i>	

All prices include Sales Tax and are subject to change without notice. Prices are FOB Adelaide. Add \$20 road freight anywhere in Australia. All equipment carries MICRO-80's Australia-wide 90 day warranty covering parts and labour.

### SCARFMAN

This incredibly popular game craze now runs on your TRS-80! It's eat or be eaten. You run Scarfman around the maze, gobbling up everything in your path. Try to eat it all before nasty monsters devour you. Excellent high speed machine language action game from the Cornsoft Group. With sound.

Price: \$17.95

### THE WILD WEST

It's up to you to keep the West beautiful with Outlaws and renegade Indians on all sides. Even the train has been captured by Outlaws with all the payroll on board. Can you clean up the Wild West?

Price: \$26.50

### SPACE ATTACK

Steady your nerves, keep a sharp lookout, and prepare for battle to save your city. Fiendish aliens are all around, and if they destroy the city you lose.

Price: \$26.50

### STRIKE FORCE

As the primary defender of a world of cities under deadly alien attack, your weaponry is the latest: rapid fire missiles, long range radar, and incendiary "star shells." Your force field can absorb only a limited number of impacts. A complex game of strategy, skill and reflexes from Melbourne House.

Price: \$26.50

### PENETRATOR

Soar swiftly over jagged landscape, swooping high and low to avoid obstacles and enemy missiles attacks. With miles of wild terrain and tunnels to penetrate, you're well armed with bombs and multiple forward missile capability. From Melbourne House. Features sound, trainer mode and customizing program.

Price: \$36.50

## STICKEROO JOYSTICK INTERFACE

for the TRS-80  
MODEL I  
and SYSTEM 80

FROM **\$32.00**  
ADD \$2.00 p. & p.

### CONVERT YOUR COMPUTER INTO AN ARCADE GAMES MACHINE Micro-80's Stickeroo Interface Features:

- Compatible with Joysticks for Atari, Vic-20 and most video games
- Saves your keyboard from abuse
- Compatible with programs from leading US software houses: Big Five, Cornsoft, Melbourne House, Adventure International
- Adds a whole new dimension of pleasure and fun to your favourite games
- Will be supported in MICRO-80
- Can be used with your own basic or ML Programs
- Comes complete, ready to plug in and use
- Absolutely no modifications required to your computer

Due to popular demand, Stickeroo Interface is now available separately so you can use the Joystick of your choice.

**PRICE INCLUDES ... STICKEROO + INSTRUCTIONS + DEMO PROGRAM LISTING  
PLEASE SPECIFY TRS-80 MODEL I OR SYSTEM 80 WHEN ORDERING**

The Stickeroo Interface plugs in to the expansion edge connector and may not be suitable for expanded systems.

**PISTOL GRIP JOYSTICK WITH FIRE BUTTON**

**\$25 + \$2 p & p** (No p & p required if ordered with Stickeroo Interface)

**ALL GAMES ADVERTISED ON THIS PAGE  
ARE STICKEROO COMPATIBLE**

### SUPER NOVA

Asteroids float ominously around the screen. You must destroy the asteroids before they destroy you! (Big asteroids break into little ones). Your ship will respond to thrust, rotate, hyperspace and fire. Watch out for that saucer with the laser! As reviewed in May 1981 Byte Magazine.

Price: \$26.50

### LUNAR LANDER

As a vast panoramic moonscape scrolls by, select one of many landing sights. The more perilous the spot, the more points scored -- if you land safely. You control LEM main engines and side thrusters. One of the best uses of TRS-80 graphics we have ever seen. From Adventure International. With sound.

Price: \$26.50

### COSMIC FIGHTER®

Your ship comes out of hyperspace under a convoy of aliens. You destroy every one. But another set appears. These seem more intelligent. You eliminate them too. Your fuel supply is diminishing. You must destroy two more sets before you can dock. The space station is now on your scanner. With sound!

Price: \$26.50

### METEOR MISSION II

As you look down on your view, astronauts cry out for rescue. You must maneuver through the asteroids and meteors. (Can you get back to the space station?) Fire lasers to destroy the asteroids, but watch out, there could be an alien Flagship lurking. Includes sound effects!

Price: \$26.50

### GALAXY INVASION

The sound of the klaxon is calling you! Invaders have been spotted warping toward Earth. You shift right and left as you fire your lasers. A few break formation and fly straight at you! You place your finger on the fire button knowing that this shot must connect! With sound effects!

Price: \$26.50

### DEFENSE COMMAND

The invaders are back! Alone, you defend the all important nuclear fuel canisters from the repeated attacks of thieving aliens, repeatedly. An alien passes your guard, snatches a canister and flies straight off. Quick! You have one last chance to blast him from the sky! With sound and voice.

Price: \$26.50

### ATTACK FORCE®

As your ship appears on the bottom of the maze, eight alien ships appear on the top, all traveling directly at you! You move toward them and fire missiles. But the more aliens you destroy, the faster the remaining ones become. If you get too good you must endure the "Flagship" With sound effects!

Price: \$26.50

# FOR YOUR ENTERTAINMENT

MICRO-80 now offers you the widest range possible in entertainment software. These programs are supplied on cassette for the Level II/16K TRS-80 Model I/III (except as noted). They are also suitable for the System 80 but sound may not be available unless a hardware modification has been fitted to reverse the roles of recorders #1 and #2. *Order yours now while stocks last!*

**DEFENCE PENETRATOR** \$20.95

DEFENCE PENETRATOR is based on one of the most popular arcade favourites of all time with smooth graphics and sound effects. With realistic scrolling planetscape it's the best game yet.

**DEVIL'S TOWER** \$25.95

Aliens move in waves of 5 attackers with their robot scouts attacking you from the mountain, their war machines and their protector ships putting up force fields to protect them. Only your skill and fast reflexes can save the plant.

**BATTLE STATION** \$21.50

The aim of the game is to defend your space station against the attack of four alien space ships.

**MORGOTH** \$20.95

Morgoth is a unique action packed adventure allowing you to wander through the enchanted dominion of Morgoth and collect the lost treasures of KAZARD KALLAHAN. But Beware! You must escape before the satanic Morgoth is aroused and seeks ye!

**KILLER BEETLES** \$21.50

The aim of the game is to dig traps. When a beetle falls in you must fill it in to bury them, before they can catch you.

**STAR CRESTA** \$20.95

Star Cresta takes you beyond the limits of your computer and into the Cosmic void itself! Beware! Iron clad concentration and lightning reflexes are required to destroy the evil empress.

**JUNGLE RAIDERS** \$21.50

The aim of the game is to defend your four bases from the marauding Jungle Raiders. Your skill all the Jungle Raiders and they try to hit you with their spears or drag off all four of your bases.

**ALIEN TAXI** \$28.50

Your goal is to pick up and deliver passengers to an underground resort hotel. There is a fare at each of the 12 taxi stands on the first level and 12 more on the second level.

**KILLER GORILLA** \$21.50

Four completely different frames. Each one offering a different challenge, makes this one of the most complex and stimulating games ever written for a TRS-80. The game keeps track of the top ten scores along with a six character name for each score.

**JUNGLE BOY** \$21.50

The ultimate challenge! Are your reflexes fast enough to swing Jungle Boy from vine to vine? Can you swing through the jungle? Can you swim by the alligators? These are just some of the things you will find very challenging in Jungle Boy.

**STELLAR WARP** \$20.95

Animation with superior fighter craft brings you an even greater challenge. As your computer advances your level, the aliens become more dangerous and the harder it is to stay alive!

**HOPPY** \$21.50

The aim of the game is to get your frogs across the busy highway without being squashed and then across the river by means of floating logs and turtles.

**PANIK** \$28.50

Your mission is to rid the galaxy of the Mzors forever. Mzors are half animal and half machine. Their leaders are very difficult to destroy and are capable of creating more warriors at will. Your weapons are your energy pistol, short range transporter pack and your courage.

**INSECT FRENZY** \$21.50

The aim is to stop the centipede from getting you, all the time keeping an eye out for the giant spider.

**ALIEN CRESTA** \$21.50

The aim is to defend your ship from numerous attacks from an assortment of aliens. If you get hit three times, it's all over.

**DESERT PERIL** \$28.50

The Zagons have mined the desert and have put killer satellites, drone bomber balloons, and flying dragons along the whole trail. The future of your planet's race depends on your skill and daring.

**RALLY RACER** \$20.95

Drive through an action packed maze and try to hit all the flags before Morgan the Mad motorist or Crazy Harry and his killer hoodlums catch you!

**NOTE:**

*As the prices of imported software may vary, these prices are valid for current stock only and prices are subject to change without notice.*

## Double Your Disk Storage Capacity with the **LNDoubler 5/8**

The LNDoubler is easily installed into your expansion interface and provides support for both 5¼" and 8" disk drives. Completely compatible with all the major Disk Operating Systems, the LNDoubler provides technically advanced, tested and reliable double-density operation with such features as:

- Analog phase lock loop data separation.
- Precision write precompensation.
- High quality PCB with all contacts gold-plated.
- Drives 1-3 may be software selected
- as 5" or 8" drives and a switch is provided for drive 0.
- Supports any mix of 5" or 8" drives, single or double density, single or double sided.

The LNDoubler will increase the formatted storage capacity of **each** 40 track single-sided drive by 80% to over 180Kbytes — for just over half the cost of one disk drive. With an 8 inch double-sided double-density disk drive, you can have over one Megabyte of online storage!

The LNDoubler 5/8 doubler with documentation is available for ...

**\$285 plus \$2.00 p&p.**

*NOTE: A special cable is required for 8" drive operation and 8" double-density operation requires a 3.55 MHz CPU speed-up modification.*

**now available ...**

## **DOSPLUS 3.5**

is the state of the art in Disk Operating Systems for the Model 1 and Model 3 offering an order of magnitude increase in flexibility and performance over its predecessor DOSPLUS 3.4 and yet, is easier to use and more friendly with a Help facility explaining the syntax of DOS commands. The huge manual of over 350 pages describes the system in detail and is sectioned and tagged so that you can find what you want more quickly. Far greater flexibility is offered by the introduction of device drivers that are external to the system and that can be tailored to your needs.

**Some of the features offered by DOSPLUS 3.5 are ...**

- Single and double density support with density recognition.
- Improved file control facilities and date stamping of files.
- A keyboard driver that offers single key entry.
- An extensive Job Control Language.
- Complete and detailed technical system information.
- Two versions of BASIC, plus a BASIC label facility.
- and much more.

**DOSPLUS 3.5 REPRESENTS EXCELLENT VALUE AT \$160**

*When ordering by MAIL please specify Model 1 or Model 3 and include \$2 for freight*

**Run your own bulletin board with ...**

**MICRO-80 BULLETIN BOARD SYSTEM** **\$119.00 + \$2.00 p&p**

MICRO-80 (!) is an advanced Bulletin Board System that can be configured to be public allowing anyone to use the system, to be private allowing only authorised access or to allow limited access to some users. As well as providing facilities for uploading/downloading program/data files and messages, MICRO-80 features multi-level system security, user passwords, provision for private messages and permanent user records, and automatically reclaims space when messages are deleted. MICRO-80 is provided with a minimum DOSPLUS operating system kernel.

**MICROTERM 1.4** **\$119.00 + \$2.00 p&p**

The intelligent microcomputer terminal package that provides many unique features such as Auto Dial and Automatic Transmission Time to send files to a remote site at any time, automatically. Microterm is provided with a minimum DOSPLUS operating system kernel and utility programs to upload and download both program and data files, and allows you to execute DOS commands without exiting the program. The input buffer continues to collect incoming data while going from terminal mode to command mode. The Model 3 version is certified to operate at speeds up to 4800 baud and the Model 1 version up to 600 baud (with no nulls inserted).

*(Minimum System Requirements: 48K Model 3, 2 Drives, RS-232-C and Modem)*

*All prices include Sales Tax and are subject to change without notice. Some items are in limited supply. All equipment carries MICRO-80's Australia-wide warranty covering parts and labour.*

# Daisy Wheel Printers/Typewriters

## OLIVETTI PRAXIS 35

**\$895**

plus \$10 road freight anywhere in Australia

## OLIVETTI ET-121

**\$1500**

plus \$20 road freight anywhere in Australia

MICRO-80 has converted these OLIVETTI typewriters to work with the TRS-80, SYSTEM 80 or any other microcomputer with a Centronics parallel port. Now you can have the best of both worlds — an attractive, modern, correcting electronic typewriter which doubles as a correspondence quality Daisy Wheel printer when used with your microcomputer.

The **PRAXIS** is a portable typewriter, designed for private and light commercial use with an average print speed of 6.5 c.p.s.

The **ET-121** is a large typewriter intended for heavier duty and features a print speed of up to 11.5 c.p.s.

**Centronics printer cable to suit TRS-80 or SYSTEM 80 . . . . . \$39**

MICRO-80 is an A-Grade Olivetti distributor and has been producing printer conversions for Olivetti daisy wheel typewriters for several years. Write or call for full details.

## 16K Memory Upgrade Kit

**\$30**

plus \$2.00 p. & p.

Large volume means we can buy better and can pass the savings on to you. There are our proven, prime, branded 200 nanosecond chips, guaranteed for 12 months.

A pair of DIP shunts is also required to upgrade CPU memory in the TRS-80 — these cost an additional \$4.00. All kits come complete with full, step-by-step instructions which include labelled photographs. No soldering is required. You do not have to be an experienced electronic technician to install them.

## Lower Case Modification

**\$49**

plus \$2.00 p. & p.

The MICRO-80 modification features true below-the-line descenders, a block cursor and symbols for the 4 playing-card suits. Each kit comes with comprehensive fitting instructions and two universal lower-case driver routines on cassette to enable you to display lower case. These routines are self-relocating, self-protecting and will co-reside with other machine language programs (the second includes keyboard-debounce and flashing cursor). Fitting requires soldering inside the computer and should only be carried out by an experienced hobbyist or technician. A fitting service is available in capital cities for only \$20.00 and a list of installers is included with each kit. (Specify TRS-80 Model I or System 80 when ordering.)

## DISK OPERATING SYSTEMS & DEVELOPMENT SOFTWARE

You can increase your programming productivity, the execution speed and 'user friendliness' of your programs by using an enhanced Disk Operating System (DOS). Together with the other utility software, you can get the most from your disk drives.

### DOSPLUS 3.4

**\$149.95**

(Specify Model I single/double density or Model III)

A powerful DOS that provides many features and comes with a stand alone manual. With a high-degree of compatibility with TRSDOS, DOSPLUS 3.4 is suitable for the first-time or experienced user.

### DOSPLUS 3.5

**\$160.00**

(Specify Model I or Model III)

DOSPLUS 3.5 is a powerful, sophisticated DOS intended for the experienced user. The system can be configured to suit your requirements, provides greatly enhanced features over 3.4 and new features like single-key entry, date-stamping of files, a Help file and more. More user friendly than 3.4, DOSPLUS 3.5 comes with a very extensive stand-alone manual.

### ENHBAS

**\$52.95**

ENHBAS adds over 30 new commands and functions to your BASIC interpreter including high speed SORT, labels in BASIC, RESTORE to any line number, WHILE-WEND for structured programming, SCROLL, LEFT, INVERT, DRAW and PLOT to give you ease of control over graphics, SOUND and PLAY to add realistic sound effects and many more. Makes programming a breeze! Available for Model I or III, disk or cassette — specify which when ordering.

### NEWDOS 80 VERSION 2.0

**\$185.00**

(Specify Model I or Model III)

Newdos 80 suits the experienced user who has already used TRSDOS, understands the manual and is prepared to learn the somewhat complicated syntax of one of the most powerful DOS's available. With the correct hardware, Newdos 80 supports any mix of single- or double-sided, single or double density, 5" or 8" disk drives with track counts up to 96. It provides powerful, flexible file handling in BASIC including variable length records up to 4096 bytes. Definitely not for the beginner.

### MASTER DISK DIRECTORY

**\$20.95**

FIND THE PROGRAM FAST!! PAYS FOR ITSELF BY RELEASING REDUDANT DISK SPACE!! MASTER DIRECTORY records the directories of all your individual disks onto one directory disk. Then it allows you examine them, find an individual file quickly, list files alphabetically, weed out redundant files, identify disks with free space, list files by extension, etc., etc. This program is invaluable for the serious disk user and will pay for itself many times over. Not fully compatible with NEWDOS 80.

### THE FLOPPY DOCTOR/MEMORY DIAGNOSTIC

**Model III Disk \$43.50**

THE MICRO CLINIC offers two programs designed to thoroughly check out the two most trouble-prone sections of the TRS-80 — the disk system (controller and drives) and the memory arrays. Both programs are written in Z80 machine code and are supplied together on diskette for a minimum 32K, one disk system.

Note: For DOSes, include \$2.00 for freight.

## MORE ENTERTAINMENT SOFTWARE

### BOSKONE ALERT

**\$25.50**

You have total control of every aspect of your fighter and must use your laser to destroy 9 Deathstars before the Earth comes into range.

### OUTLAND

**\$25.95**

You must use your skills, reflexes and an array of weapons to defend your colony against the attacks of Xenos Star Raiders and prevent its destruction.

### STELLAR WARP

**\$20.95**

Use your fighter craft to destroy the aliens who become more dangerous as your level advances. Beware of the space mines. In an emergency, activate Stellar Warp.

### DOOMSDAY MISSION

**\$25.50**

You must disarm a number of nuclear missiles left by saboteurs on one of our space stations. Any direct assault on the station could launch those missiles.

---

# CP-80 DOT MATRIX PRINTER

- Features:
- 80 cps bi-directional, logic seeking
  - 40, 71, 80 or 142 characters per line
  - Normal and italic alphanumeric, symbol and semi-graphic characters
  - Unidirectional bit image graphics (8 x 640 or 8 x 1280 dot/line)
  - Tractor and friction feed

**EPSON MX80 compatible control codes**  
**FOR A LOW \$599**

---

## SPECIAL ANNOUNCEMENT

We are expanding our range of disk drives to include the new

### **S L I M L I N E** **MINI-FLOPPY DISK DRIVES**

These half-height, 5¼" disk drives represent the state of the art in both technological design and mechanical construction. With the characteristic high quality of manufacture expected in Japanese products, these drives feature ultra-modern electronics, servo-controlled direct drive motors and exceptional physical construction that provide extremely reliable, smooth and quiet operation in both single and double density. Two varieties will be available shortly: 40 track double sided and 80 track double sided.

Please WRITE for further information.

---

### OTHER PRINTERS AVAILABLE:

**EPSON RX-80** \$995

Features: 100 cps, 6 character sizes, bit image and graphic modes.

**ITOH PROWRITER 8510** \$1150

Features: 120 cps, bit graphics and proportional printing.

**EPSON FX-80** \$1399

Features: 160 cps, 6 character sizes, proportional printing, bit graphics.

All prices include Sales Tax and are correct at time of publication but are subject to change without notice.  
All equipment carries MICRO-80's Australia-wide 90 day warranty covering parts and labour.  
Add \$10 road freight anywhere in Australia.

## \*\*\*\*\* NEXT MONTH'S ISSUE \*\*\*\*\*

Next month's issue will contain at least the following programs plus the usual features and articles. An (80) after a program title indicates that the program will be for TRS-80 Model 1/3 or System 80/Video Genie. A (CC) indicates that the program will be for the TRS-80 Colour Computer and (Peach) that the program is for the Hitachi Peach.

## \*\* DESERT CHASE (80) L2/16K \*\*

In this graphic game of high adventure, the object is to travel across the vast Simpson Desert. Your journey is made perilous by such hazards as wild tribesmen, lack of water and sandstorms.

## \*\* FORMATION (80) L2/16K \*\*

Formation is an Electronic Form Creation and Data Entry System. The program lets you design and store a form that will later accept operator input. The data that is entered by the operator is transformed into normal BASIC DATA lines that can be manipulated by your own program.

## \*\* OTHELLO (CC) \*\*

Othello is written for the 16K Colour Computer, it is a game of strategy for two players and is based on the board game of the same name. The game is played on a 8x8 board and you must outflank your opponent to flip his playing pieces to your colour.

## \*\* PRIORITIES (80) L2/16K \*\*

It seems that the Razor Gang have been responsible for a lot of things, even this program. The Doctor who wrote it needed to order the activities if his hospital into order of priority. I don't know if the razor gang will be after you, but you too can now order your priorities.

## \*\* THE TOWERS OF HANOI (CC &amp; PEACH) \*\*

This popular game has now been converted to run on your Hitachi Peach or Colour Computer with the addition of colour and sound. You have three pegs and a number of disks. You must get all the disks from the leftmost peg to the rightmost peg by moving one disk at a time without putting a large disk on top of a small disk. It will drive you mad!!

## \*\* REGISTER DISPLAY PROGRAM (Peach) \*\*

This program provides an easy means of examining register contents at any time during the operation of a program. The Register Display program can provide information at any point in a program and can then revert to either the program under test, to BASIC command level or to the machine language monitor.

APPLICATION FOR PUBLICATION  
OF A PROGRAM  
IN MICRO-80

Date .....

To MICRO-80  
SOFTWARE DEPT.  
P.O. BOX 145,  
MORPHETT VALE, SA., 5162

Please consider the enclosed program for  
publication in MICRO-80.

Name .....

Address .....

Postcode .....

\*\*\* CHECK LIST \*\*\*

Please ensure that the cassette or disk is clearly marked with your name and address, program name(s), Memory size, Level I, II, System 1 or 2, Edtasm, System, etc. The use of REM statements with your name and address is suggested, in case the program becomes separated from the accompanying literature.

Ensure that you supply adequate instructions, notes on what the program does and how it does it, etc.

For system tapes, the start, end, and entry points, etc.

The changes or improvements that you think may improve it.

Please package securely — padabags are suggested — and enclose stamps or postage if you want your cassette or disk returned.

\*\*\*\*\* CASSETTE/DISK EDITION INDEX \*\*\*\*\*

The cassette edition of MICRO-80 contains all the applicable software listed each month, on cassette. For machine language programs copies of both the source and object file are provided. All programs are recorded twice. Level 1 programs can only be loaded into a Level 2 machine if the 'Level 1 in Level 2' program from the MICRO-80 Software Library - Vol 1 is loaded first.

Note: System 80/Video Genie computers have had different tape-counters fitted at different times. The approximate start positions shown are correct for the very early System 80 without the volume control or level meter. They are probably incorrect for later machines. The rates for a cassette subscription are printed on the inside front cover of each issue of the magazine.

The disk edition contains all applicable programs which can be executed from disk. Level 1 disk programs are saved in NEWDOS format. Users require the Level 1/CMD utility supplied with NEWDOS+ or NEWDOS 80 version 1.0 to run them.

# SAVE A PACKET ON MICRO-80's DISK DRIVE PACKAGES FOR TRS-80 MODEL 1 AND SYSTEM 80 MICROCOMPUTERS

**SINGLE DRIVE PACKAGE from ... \$499**

**DUAL DRIVE PACKAGE from ... \$874**

Bigger volume means lower cost price, which we are passing on to you. Avoid the annoying bundle of cables, wires and separate boxes. MICRO-80 is now offering our well-proven MPI disk drives in attractive, self-contained single or dual-drive cabinets complete with internal power supply. Our drive Ø and dual-drive packages also include the appropriate version of DOSPLUS and dual-drive cable.

*The best news of all is the specially reduced package prices ...*  
**SAVE \$23 — \$107 over our already low prices!**

*Choose the appropriate system from the table below:*

DRIVE TYPE	No. of Tracks	No. of Heads	Capacity	Dosplus Version	Price	* Saving
<b>DRIVE Ø</b>						
1 x MPI B51	40	1	100K	3.4	\$499	\$137.95
1 x MPI B52	40	2	200K	3.4	\$639	\$97.95
1 x MPI B92	80	2	400K	3.4	\$799	\$107.95
<b>DRIVE 1</b>						
1 x MPI B51	40	1	100K	—	\$415	\$33.00
1 x MPI B52	40	2	200K	—	\$525	\$23.00
1 x MPI B92	80	2	400K	—	\$695	\$23.00

\*Represents the saving compared with buying all the items included in the package separately

•Drive Ø package includes one bare disk drive, self-contained single-drive cabinet/power supply as illustrated, two drive cable and the version of DOSPLUS indicated.

•Drive 1 package includes one bare disk drive and self-contained single-drive cabinet/power supply as illustrated.

*If it's a dual-drive system you need, then take advantage of our dual-drive package and*  
**SAVE a further \$40 on the price of two single-drive packages ...**

DRIVE TYPE	No. of Tracks	No. of Heads	Capacity	Dosplus Version	Price
2 x MPI B51	40 ea	1 ea	2 x 100K	3.4	\$874
2 x MPI B52	40 ea	2 ea	2 x 200K	3.4	\$1125
2 x MPI B92	80 ea	2 ea	2 x 400K	3.4	\$1454

Dual-drive package includes two bare disk drives, self-contained dual-drive cabinet/power supply as illustrated, two drive cables and the version of Dosplus indicated.

NOTE: All 40 track drives are completely compatible with 35 track operating systems such as TRSDOS. DOSPLUS allows you to realise an additional 14% capacity compared with TRSDOS. Under DOSPLUS 3.4, 80 track drives can read 35/40 track diskettes.

All disk drive components are still available separately:

**BARE DRIVES** — MPI drives offer the fastest track-to-track access time (5 milliseconds) available. All drives are capable of operating in double density for 80% greater storage capacity.

	Price	Freight		Price
MPI B51 40 track, single-head, 100K	\$349	\$5.00	Self-contained, single drive cabinet/power supply	\$99
MPI B52 40 track, dual-head, 200K	\$449	\$5.00	Self-contained, dual-drive cabinet/power supply	\$135
MPI B92 80 track, dual-head, 400K	\$619	\$5.00	Two drive cable	\$39
Separate, dual-drive power supply	\$85	\$8.00	Four drive cable	\$49
			DOSPLUS 3.4	\$149.95
				\$2.00

Prices are FOB Adelaide. Add \$5.00 freight for single drive package, \$10.00 for dual-drive package. Prices are in Australian dollars. Freight is road freight anywhere in Australia.

All items carry a 90-day parts and labour warranty. Repairs to be carried out in our Adelaide workshops.

## LEVEL 2 ROM ASSEMBLY LANGUAGE TOOLKIT by Edwin Paay FOR TRS-80 MODEL 1, MODEL 3 AND SYSTEM 80/VIDEO GENIE

This is a new package consisting of two invaluable components:

- **A ROM REFERENCE** Manual which catalogues, describes and cross-references the useful and usable ROM routines which you can incorporate into your own machine language or BASIC programs.
- **DEBUG**, a machine language disassembling debugging program to speed up the development of your own machine language programs. DEBUG is distributed on a cassette and may be used from disk or cassette.

Part 1 of the ROM REFERENCE manual gives detailed explanations of the processes used for arithmetical calculations, logical operations, data movements etc. It also describes the various formats used for BASIC, System and Editor/Assembly tapes. There is a special section devoted to those additional routines in the TRS-80 Model 3 ROM. This is the first time this information has been made available, anywhere. Differences between the System 80/Video Genie are also described. Part 1 is organised into subject specific tables so that you can quickly locate all the routines to carry out a given function and then choose the one which meets your requirements.

Part 2 gives detailed information about each of the routines in the order in which they appear in the ROM. It describes their functions, explains how to use them in your own machine language programs and notes the effect of each on the various Z80 registers.

Part 2 also details the contents of system RAM and shows you how to intercept BASIC routines. With this knowledge, you can add your own commands to BASIC, for instance, or position BASIC programs in high memory — the only restriction is your own imagination!

The Appendices contain sample programmes which show you how you can use the ROM routines to speed up your machine language programs and reduce the amount of code you need to write.

**DEBUG:** Eddy Paay was not satisfied with any of the commercially available debugging programs, so he developed his own. DEBUG: allows you to single-step through your program; has a disassembler which disassembles the next instruction before executing it or allows you to bypass execution and pass on through the program, disassembling as you go; displays/edits memory in Hex or ASCII; allows Register editing; has the ability to read and write System tapes and all this on the bottom 3 lines of your screen, thus freeing the rest of the screen for program displays. Four versions of DEBUG are included in the package to cope with different memory sizes.

**The best news of all is the price. The complete Level 2 ROM ASSEMBLY LANGUAGE TOOLKIT is only:**

- Aus. \$29.95 + \$2.00 p&p
- UK £18.00 + £1.00 p&p

**SPECIAL OFFER TO OWNERS OF THE LEVEL II ROM REFERENCE MANUAL ...**

**UPGRADE TO THIS ASSEMBLY LANGUAGE TOOLKIT FOR ONLY \$19.95!**

Send back your original Level II ROM Reference Manual plus a cheque, money order or Bankcard authorisation for \$19.95 plus \$2.00 p&p and we will send you the new  
**ASSEMBLY LANGUAGE TOOLKIT**
